

CLAIMS

1. A spinning sign comprising: a sinusoidal profile sign body having a pair of opposed sides,
each side displaying a concave half and a convex half; a central axis of rotation defining an axle
5 channel through the sign body.
2. The sign in claim 1 wherein the pair of sign bodies is hingedly attached along one side so that they fold together to form the sign.
3. The sign in claim 1 wherein the pair of sign bodies is attachable by adhesive.
4. A spinning sign comprising: a pair of sinusoidal profile sign bodies attachable to each other; a
10 central axis of rotation defined through the sign body, the axis defining a groove formed by the pair of sinusoidal profile sign bodies when secured around an axle, wherein said spinning sign forms a pair of opposed sides, each side displaying a concave half and a convex half; the sign having a sinusoidal profile.
5. The sign in claim 4 wherein the pair of sign bodies is hingedly attached along one side so that
15 they fold together to form the sign.
6. The sign in claim 4 wherein the pair of sign bodies is attachable by adhesive.
